

Upgrade Your VPN to Secure Cloud-Delivered Remote Access

Special Discount for SMA100 Users

Why now?

If you're still using a SonicWall SMA100 device, it's time to plan ahead. SonicWall has announced the end-of-sale for SMA100, with support ending soon. To make the move easier and more affordable, we're offering a limited-time discount to upgrade to Cloud Secure Edge (CSE) — our modern, cloud-delivered remote access solution.

Why upgrade?

- **Outdated VPNs Put Your Business at Risk**

Cyberattacks are on the rise — especially through older VPNs. In 2024, over half of organizations were hit by attacks targeting remote access tools. Legacy VPNs are harder to maintain and often leave gaps that cybercriminals can exploit. Many businesses simply cannot afford to deal with a breach or attack. CSE helps reduce those risks with stronger security and better protection for your business.

- **Save Money While Building for the Future**

This upgrade offer lets you protect your investment in SonicWall while moving to a more reliable, and robust solution at a significantly reduced cost.

- **Work from Anywhere, Hassle-Free**

Today's teams need to stay connected from anywhere — securely and without hassle. CSE is built to give your employees fast, easy, and secure access whether they're in the office or remote.

What you Get with Cloud Secure Edge (CSE):

- **Address Security Gaps and Limit Risk**

CSE uses Zero Trust principles to make sure employees only access what they need — no more, no less. This limits exposure and helps block threats before they become breaches.

- **Superior User Experience**

Forget the slow, frustrating VPN experience. CSE routes traffic smartly for faster performance, and your employees can use it with little to no training.

- **Easy to Grow with Your Business**

No extra hardware. No complicated setup. CSE's cloud-based design grows with you, so you can add users or locations as needed — without extra IT headaches.
